A New Software that Answers the Important Questions

As you know, AaSys is continually assessing new products that we feel are not only more efficient, but also offer our customers more bang for your buck. We stay ahead of the curve to ensure our customers receive the best options in terms of productivity and reliability. Netwrix is one of those products that we believe offers all of these.

Netwrix Auditor is an IT audit software that maximizes visibility of IT infrastruc-

ture changes and data access. The product provides an in-depth look at who has access to what and who made changes to what, when and where. It allows your network to be on constant surveillance, which in turn minimizes security risk. Netwrix Auditors provides a way to eliminate loopholes and makes it easy to identify changes that violate your corporate security policies, therefore allowing you to proactively detect suspicious user activity, investigate unauthorized changes and prevent breaches.

Netwrix also offers Active Directory Auditing. Some of the great features of Active Directory Auditing include inactive user tracking, password expiration alerting, and detailed audit reports and dashboards. The application offers complete visibility of Active Directory and Group Policy changes, which is imperative in order to stay within your company's compliance guidelines, along with government or industry regulation requirements.

There are over 200 prepared reports that can be accessed, and you have the ability to customize your own reports to fit your needs. Netwrix allows you to have real time snapshots of what is happening on your network, removing the guesswork. Additionally, the product has been well received by regulators.

If you want to learn more about Netwrix and how it can help your organization, please contact your dedicated Account Manager for additional information.

We Heard You!

Last month, we told our readers about the new DMARC Implementation Services AaSys is offering. DMARC is a standard that allows participants to ensure that emails being received are not spoofed and legitimately originate from the sender. Not only can DMARC prevent hoax emails from entering your organization, but it can prevent others from spoofing your domain. We are excited that many of our customers have already taken advantage of these services, especially those who have or will be purchasing a *.bank* domain in the future.

We also listened to your feedback about wanting more technical assistance with the *.bank* domain and now we are doing something about it!

AaSys knows that dealing with the technical aspect of things is not always easy, and because of that, we have extended our services to include guidance on implementing *.bank* do-

main. We want to support our customers every step of the way.

We appreciate your feedback and want to continue to hear from you.

Please reach out to your Account Manager to learn more about how we can help make your transition to the new *.bank* domain a smooth and seamless one.

5 Internet Security Tips for Your Holiday Shopping

Christmas is almost here! The holidays just wouldn't be the same without the last minute shopping sprees. Some of you will forgo the pushing and shoving and long lines at the malls and opt to shop in the comfort of your own home. While you sip on eggnog and scroll through all the great merchandise on Amazon, here are five tips to help you stay safe online:

1. **Know your merchants.** This is the time of the year where many cyber criminals try to recreate websites in the hopes a user would not notice they spelled Target with two Ts instead of one. Always check your URLs!
2. **Make sure your browser is current and up-to-date.**
3. **Leave the pop ups alone!** Companies have done a

great job of making pop ups of an item you were just Googling the day before very visible on your screen. But some of those could be a trap to infect your computer with a virus or malware.

4. **Use a really good, complicated password.** You hear this all the time but a good password is always the best first line of defense.
5. **Don't auto-save your personal information on websites.** It may seem really convenient however, it

could be detrimental if your information got into the hands of a hacker. It could wreak havoc on you financially and personally.

Happy Holidays and Safe Shopping!

Come Join Us For Our First ISO Peer Group Meeting of 2016!

AaSys Group is kicking off the New Year with Information Security Officer Peer Group Meetings in Alabama and Mississippi! The Peer Group serves as a great way for those responsible for the high demands of information Security to share best practices, discuss issues and problem solve concerns to improve the overall security structure of their financial institution. We look forward to seeing you there!
